NIDHIKAVACH — SMART FDR PORTAL

SMART INDIA HACKATHON 2026

■ proposed solution

nidhikavach

[security deposit & fdr portal]

every deposit, released right

[what it is]

A secure AICTE portal where institutions submit each FDR once, officers verify it against the bank's record, and the system watches every deadline until an **authorised, eSigned release**. Covers all 10 capabilities the PS asks for.

[usp]

Three-source truth: every field is checked three ways (declared, scanned, bank-confirmed) and rolled into one trust score. Maker ≠ checker approvals and a **hash-chained audit trail** make fraud visible, not just recorded.

■ the problem

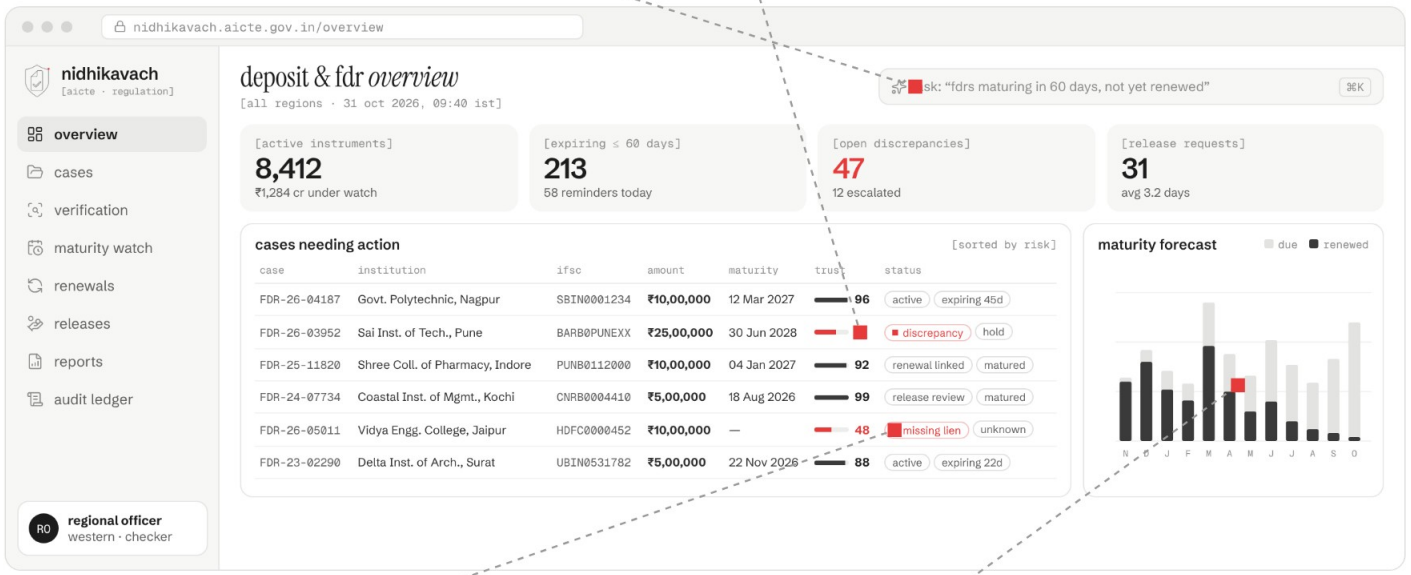

₹116.84 cr
fake fdrs at one civic body
[chandigarh mc · 2026]

₹35 lakh
per programme, held 10 yrs
[aicte aph 2024-27]

3 desks
to clear one release
[aph cl. 6.46]

[ask in plain language — "fdrs maturing in 60 days"]

[trust score from 3 sources: declared · scan · bank]

[auto-flag when the declared record ≠ bank record]

[t-90 → t-7 maturity reminders, auto-escalated]

[github repo] github.com/harshwardhan-kp/nidhikavach

TECHNICAL APPROACH

SMART INDIA HACKATHON 2026

methodology — architecture

process — one fdr, end to end

technologies to be used

Next.js · React · TypeScript · Tailwind CSS · shadcn/ui · nest · node · Temporal · FastAPI · python · PostgreSQL · redis · MinIO · OpenSearch · PyTorch · OpenCV · PaddleOCR · Hugging Face · Ollama · Keycloak · Vault · NGINX · docker · kubernetes · Github Actions · GitHub · Prometheus · Grafana · OpenTelemetry · OpenAPI · pytest · Playwright

AIT_G_SPARK

FEASIBILITY AND VIABILITY

SMART INDIA HACKATHON 2026

analysis of feasibility

[high]

technical
Proven open-source stack

[high]

operational
Fits existing AICTE roles

[high]

economic
₹0 licences · NIC cloud

[high]

legal
IT Act · DPDP 2023 · CERT-In

challenges & risks → strategies

[risk]		[strategy]
no api for every bank	→	AA consent + manual maker-checker
messy legacy records	→	Guided import — unknowns never guessed
forged fdr scans	→	Tamper scan + bank confirmation
insider self-approval	→	Maker ≠ checker, by identity
aph rules change	→	Versioned rule engine
ai mistakes	→	Advisory only — humans decide

path to deployment

sih prototype
[36 h]

regional pilot
[3 months]

national rollout
[6-9 months]

bank & e-bg links
[ongoing]

AIT_G_SPARK

IMPACT AND BENEFITS

SMART INDIA HACKATHON 2026

potential impact – pilot targets

days → hours	0	100%	1 record
[verification turnaround]	[maturities missed]	[cases with an owner & next step]	[per fdr, full history]

[measured against a manual baseline on the same sample cases, as the problem statement asks]

who gains

Regulation Bureau
[live, risk-ranked view]

Institutions
[upload once, get reminded]

Banks
[fewer verification letters]

Students & public
[deposits kept safe]

benefits

social
trust in regulator

economic
less fraud, delay

environmental
paperless fdrs

governance
audit-ready

how we compare

	[files + email + excel]	[generic e-office / dms]	nidhikavach
Single record per FDR	○	◐	●
Declared vs bank-confirmed	○	○	●
Automatic maturity alerts	○	◐	●
Renewals linked to history	○	◐	●
Maker-checker release + eSign	◐	◐	●
Tamper-evident audit trail	○	◐	●
Forged-scan detection	○	○	●

● built in ◐ partial / manual ○ not available
